Make your little green button
WORK FOR YOU

Don't want the button to show on your desktop, but still want it there for peace of mind?

No problem! You can minimise the button so that it only shows in your notification bar.

1 Right-click your button

2 Select **'Settings'** from the menu

3 Under the **'Appearance'** tab, click **'show in notification area only'**.

Hint!

You can also change the transparency settings of the button under the **'Appearance'** tab – make it as solid or as see-through as you need!

Not discreet enough?

Set up customer keyboard shortcuts instead.

1 Right-click your button

2 Select **'Settings'** from the menu

3 Under the **'Options'** tab, select which combination of keys you'd like to use.

Example: F1 + Ctrl + Alt

To summon assistance, just press you desired key combination three times in quick succession.

Want to make sure an alert never gets missed?

Add sound.

1 Right-click your button

2 Select **'Settings'** from the menu

3 Under the **'Options'** tab, tick **'Audible alert on this computer when a colleague requests assistance?'**.

Did you know?

We also offer physical panic buttons that can be plugged in to your device's USB port – they're discreet, and allow you to use the system even when your device is locked!

LITTLE GREEN BUTTON.
